FABINT
FABRICATION INTELLIGENCE

IDEAS GUY · RMIT · 2026

Semester folio

A game, a first MVP and a final product, in one document. Every project has a link and a QR code so you can open the real thing.

Prem (CEO) · Lincy (CPO) · Moss (CTO)
Tutor: Gwyllim Jahn

CONTENTS

Three projects, one semester

PROJECT 1

Ashfall Arena

A 2.5D fighting game that runs in the browser. Built to learn how to work with a coding agent.

Pages 4 to 5

Play it
premkumar-babu.github.io/ashfall-arena

PROJECT 2

Mid-semester MVP

The mid-semester pitch (24 September): a website for windows and glass that compared delivered cost from overseas with a local price.

Page 6

MVP page
Notion: Mid-semester MVP

PROJECT 3

Fabrication Intelligence

An online shop for renovation hardware from verified overseas makers. The final product.

Pages 7 to 16

Visit the site
fabricationintelligence.com

PAGE	WHAT IS ON IT
3	Week by week: what we did each week and where to see it
7 to 9	The product: problem, shop, product pages, honesty about claims
10 to 12	The team, the real numbers and the feedback we used
13 to 15	Posters, the two pitch decks, the demo video and the reflection video
16	Every link and QR code in one place
PDF	The final presentation, 19 slides with live links: fabricationintelligence.com/documents/FI-final-presentation.pdf

Week by week

WEEK	WHAT WE DID	SEE IT
Week 1 to 14 Sep	Project 1. Prem builds Ashfall Arena with a coding agent to learn how to prompt.	Game page, play link
Week 2 15 to 17 Sep	First idea: dropshipping for architectural fabrication. Moss builds a prototype, then a real website that goes live on 17 Sep. Crit: find what people cannot source.	MVP page: how we built it
Week 3 20 to 24 Sep	Project 2. Windows and glass, 20 competitors mapped, two pricing tests, accounts and a supplier workspace. Mid-semester pitch on 24 Sep with a 15 slide deck.	MVP page, mid-semester deck
Week 4 28 Sep to 4 Oct	Feedback: windows are too risky and makers do not build trust. We look at small, low risk products and their competitors.	Feedback table, page 12
Week 5 5 to 11 Oct	Project 3. Pivot on 5 Oct to a hardware shop. Prem and the coding agents rebuild the site. Live on 11 Oct at 4:15pm with 89 products.	Scope and specification
Week 6 12 to 18 Oct	Honesty fixes: FI Score off, no GST wording, labelled renders. Lincy rebuilds the identity. Demo Day on 15 Oct with posters and stories.	Posters, final deck
Weeks 7 and 8 19 Oct to 2 Nov	One support address. Game upgrade. 97 products. Scope, user testing page and full backlog written. Final presentation, folio and reflection video.	Notion: scope, testing, backlog

The feedback that mattered most. At the mid-semester pitch: dropshipping windows has too many risks. Go small and low risk, such as tiles and tools. Many makers also do not build trust with western customers.

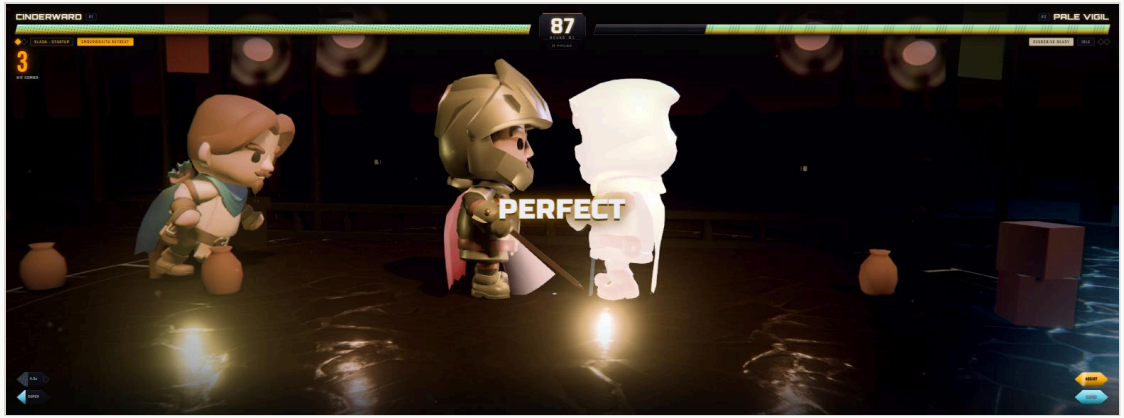

Week by week, with links

Notion submission page

PROJECT 1

Ashfall Arena

Cinderward against Pale Vigil. A slow-motion perfect hit in the courtyard.

The title screen.

A fast one-on-one fighting game that runs in the browser. Pick one of four adventurers, pair them with a summon, and fight best of three rounds against the CPU or a friend on the same keyboard.

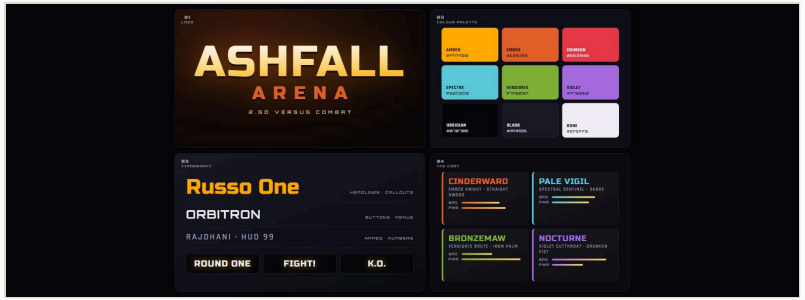

Every hit lands with hit-stop, sparks, screen shake and sound. Knockouts slow time and drain the colour from the courtyard. It plays on keyboard, mouse, gamepad or a phone, and adapts its graphics to the device.

The latest build adds fatalities, CPU personalities, a training mode and a fuller audio mix. Built by Prem with Claude Code.

How the game was made

The branding board: logo, colour palette, typography and the four fighters.

The full game page

Notion: Ashfall Arena

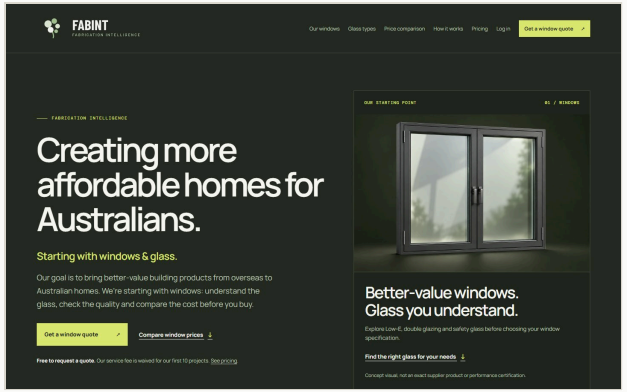

The game was my way of learning to work with a coding agent: small, clear jobs, and a check of every change.

PART	WHAT IS ON THE NOTION PAGE
Concept and precedents	What the game is and what it borrows from
Game testing and iterations	Playtests and what changed each round, including the October upgrade
Feature 1	Combat and summons
Feature 2	World, visuals and the asset pipeline
Feature 3	Audio and game feel
Feature 4	Controls, performance and mobile
Next steps and task board	What was left and how the work was tracked

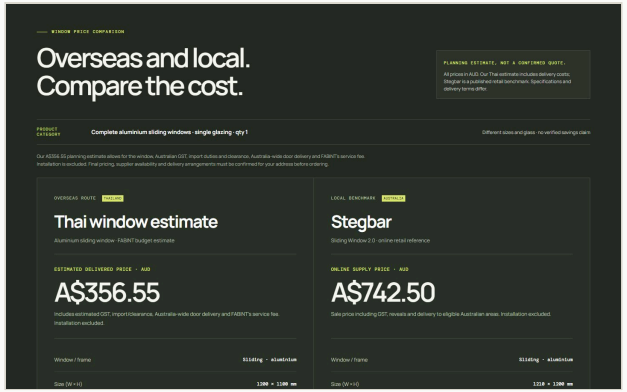

The Notion page also has the development supercut (the same fight in three versions of the game), a demo clip and two Instagram story posters.

PROJECT 2

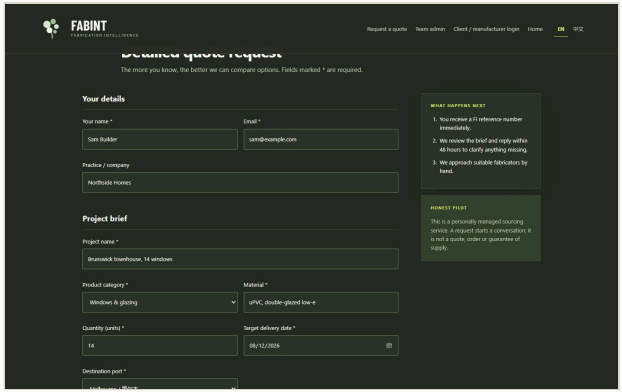

Mid-semester MVP: windows and glass

The home page: more affordable homes, starting with windows.

The price comparison: one window, overseas and local.

The request form, with a reference number straight away.

Our mid-semester MVP, presented on 24 September, helped people understand glass in plain English and compare the delivered cost of a window from overseas with a local price.

- Scope: homepage, glass guide, price comparison, quote request, team admin, accounts and an invite-only supplier workspace.
- Built with coding agents on plain HTML, CSS and JavaScript, with Supabase for requests and accounts.
- Tested with 39 automated checks, a full request flow in a headless browser, and live checks after each release.
- Mid-semester pitch: a 15 slide deck and a live demo (page 14).
- What we learned: windows have too many risks to dropship. That feedback moved us to hardware.

The MVP page

Scope, tests, presenter notes, updates log

PROJECT 3

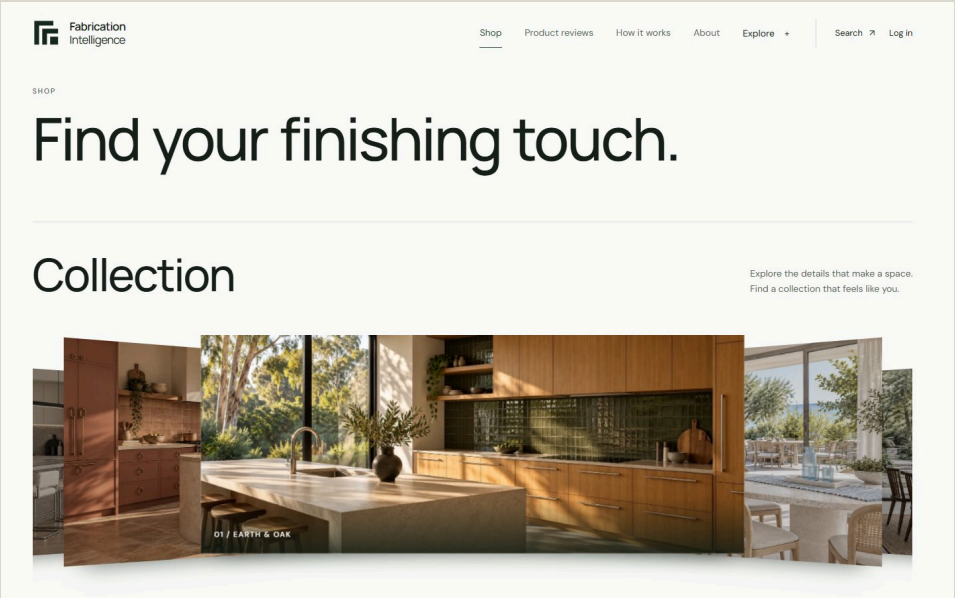

Fabrication Intelligence

An online shop for renovation hardware: handles, knobs, bathroom fittings and door hardware, from makers overseas. Prices in AUD, delivery shown before you pay, and a real person to contact.

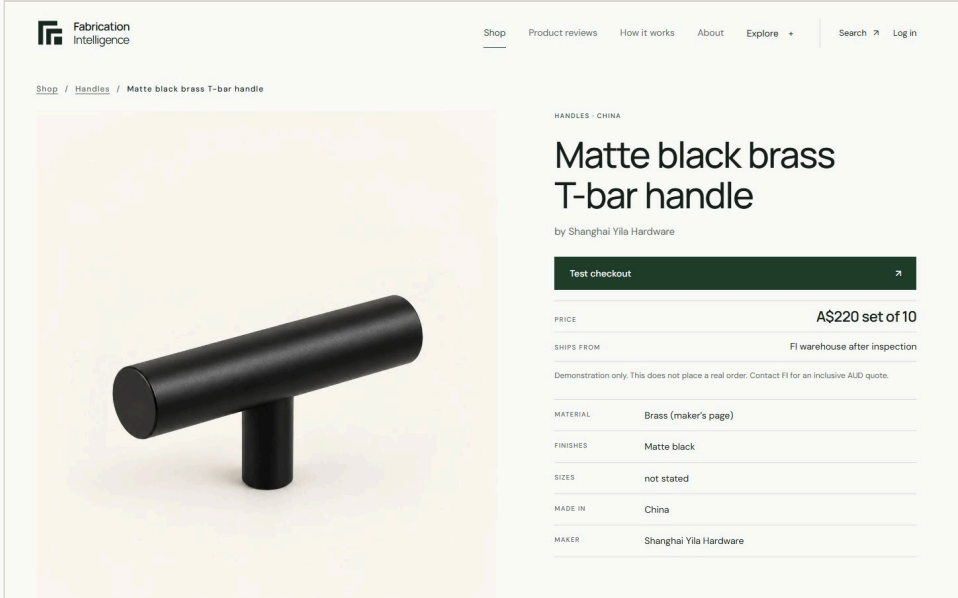

The problem. Renovators and trades either pay design-store prices or gamble on marketplaces with nobody to call.

Where we sit. A plated handle at Bunnings or IKEA is about A$5 to 10. Design stores charge A$49 to 69. Our solid brass T-bar handle is A$22 each in a set of 10 (A$220).

The shop and a product page

The shop: collections, rooms, categories, search and sorting.

A product page: the maker, the country, the material, the price and delivery.

- 97 products from 23 makers. 60 can be bought through Shopify.
- Delivery is A$11, and free over A$100. Prices are in AUD.
- Project list, accounts, a feedback page and one support address.
- Shipping, returns, privacy and terms pages.

Open the shop

PROJECT 3 · TRUST

We kept every claim true

After the first launch we reviewed our own site and found claims we could not prove. We fixed each one.

WE FOUND	WE CHANGED
An FI Score with no real reviews behind it	Switched off until real reviews exist
"incl. GST" but we are not GST registered	Removed
An A$15 Express delivery we could not run	Removed. One flat A$11, free over A$100
Photos from other companies	Replaced with labelled studio renders
Sample reviews that looked real	Labelled fictional. Testimonials only with written permission

The add-product tool

Our own tool reads a supplier page and flags claims that have no proof. On a live Made-in-China listing it read the maker, all 7 sizes, a 100-piece minimum and a price of US$1.98 to 7.76 per piece. It flagged CE and RoHS as claimed, with no certificate numbers.

Built, not live

A room preview (upload a room photo and place a product on it, and the photo never leaves the browser) and a feedback wall are built and sit on branches. A find-it-from-a-photo feature was built and then parked, because the free AI tiers need a payment method.

THE TEAM

Three final-year architecture students at RMIT

Prem, CEO

Customer, strategy and sales. Runs the coding agents on the shop, the tools and the decks.

Final year architecture student, a talkative and outgoing sales person.

Lincy, CPO

Product and research, brand and visuals, website look and imagery.

Final year architecture student who enjoys communicating with words and visuals.

Moss, CTO

Builds and tests the site, accounts, the supplier portal and the enquiry inbox.

Final year architecture student with a deep passion in coding and technology.

THE REAL NUMBERS

Where we are on 2 November 2026

97
products from 23 makers

60
can be bought through Shopify

44
people have tried the site

0
real orders and 0 testimonials. We show none rather than invent any

AREA	STATUS
Checkout	Tested end to end in Shopify test mode. The test order went through and was then cleared.
Live payments	Not switched on yet, so real orders so far: 0.
Fulfilment	Suppliers ship through DSers. The warehouse inspection step has not been run on a real order yet.
Pricing	One rule across 462 product options. Median gross margin about 59%, before returns, shipping and card fees.
Testing	195 automated checks, 179 pass. 16 older checks from earlier designs still fail.

ITERATION

Feedback we used

WHAT WE HEARD	WHAT WE CHANGED
Dropshipping windows has too many risks (tutor and class, week 9)	Moved to small, low risk hardware
Many makers do not build trust with western customers	A shop built around checked makers, with the maker and country on every product
Auto find, rank and verify trustworthy products is a great idea	Kept at the centre: certificates are checked, and the score returns when real reviews exist
Our own review of our claims	FI Score off, no GST wording, one flat delivery price, labelled renders, fictional samples marked

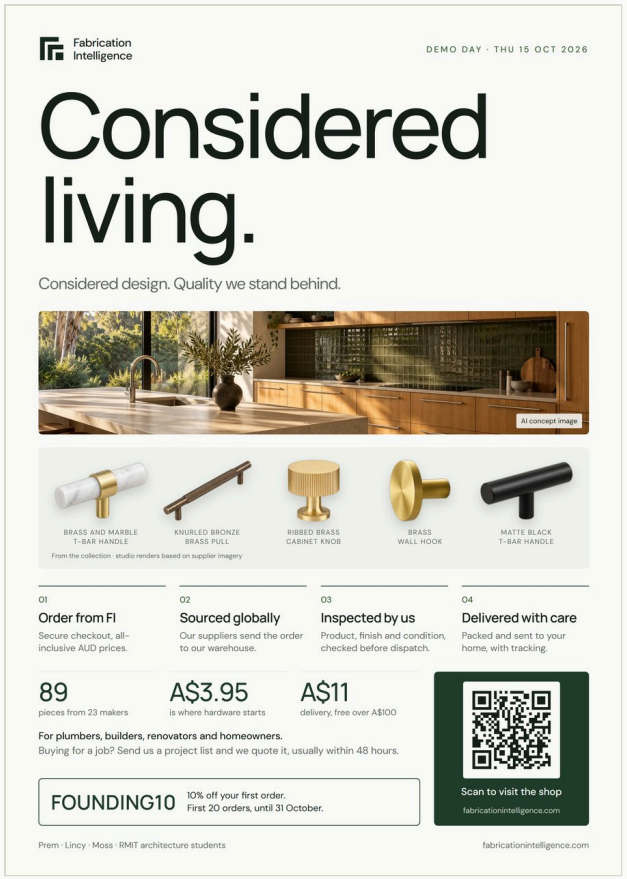

How we tested

195 automated checks, a feedback page on the site, and 44 people who tried it. Every change goes through the tests before it goes live.

Tell us what to fix

fabricationintelligence.com/feedback.html

Posters for Demo Day

Three A2 posters as printed for Demo Day on 15 October, so their numbers are from that week. The launch also had Instagram story films and a 60 second demo video.

PITCH DECKS

One deck for each presentation

PROJECT 2

Mid-semester pitch, 24 September

15 slides: why windows and why now, the problem in Lincy's words, what we do, the market, the importers, the awning price check, the live demo, two pricing tests, trust, the business model, the team and the ask.

Download the PDF

FI-mid-semester-pitch.pdf

PROJECT 3

Final presentation, Demo Day

19 slides with live links: the story, the problem, who has it, prices and positioning, how it works, the collection, the model, the numbers, the team and the ask. Submitted as its own PDF with this folio.

Download the PDF

FI-final-presentation.pdf

WATCH

The demo and the reflection

DEMO

Product demo video

A well-edited screen recording of the finished product. It is at the top of the Notion page.

Watch it on the Notion page

Notion submission page

REFLECTION

Reflection video

Prem on camera, 8 minutes 39 seconds, with a chapter for each part: where we started, the feedback that changed us, building the shop, the hard parts, where we are honestly, what he learned and what is next. A solo reflection on the whole team's work.

Watch the reflection video
